Portfolio-Website: <https://abdulrehmanakapablo.github.io/my-portfolio-website/>

PROFESSIONAL SUMMARY :

I build complete, production-ready web applications from front to back. My foundation covers core web technologies HTML, CSS, JavaScript and TypeScript paired with modern frameworks like React and Vite for fast, component-driven UIs. I design responsive, polished interfaces using Tailwind CSS/Bootstrap and handle client-side navigation with React Router. On the server I build REST APIs with Node.js and Express, secured with JWT authentication, rate limiting and input validation, and I integrate LLM features into real products while keeping them within strict token and cost budgets. For maps and geospatial features, I work with Leaflet and PostGIS. On the backend and database side, I use Supabase for relational data with real-time capabilities and Firebase for NoSQL, authentication, and cloud storage. I manage all my projects with Git for clean version control and use VS Code as my primary development environment, while using Linux as my primary operating system.

SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Frontend: React 19, React Router DOM, Vite, Tailwind CSS v4, Framer Motion, Zustand, TanStack Query, Axios, Leaflet, Responsive UI, Accessibility

Backend: Node.js, Express.js, REST API Design, JWT Authentication (Access/Refresh Tokens, httpOnly Cookies), Role-Based Access Control, Joi Validation, Multer File Uploads, bcrypt, Cron/Scheduled Jobs, Third-Party API Integration

Databases: PostgreSQL, Supabase (Auth, Storage, RPCs), Row-Level Security (RLS), PostGIS, MySQL, Firebase, NoSQL, Redis (Upstash)

AI / LLM: Groq API, LLM Integration, Prompt Engineering, Structured JSON Output and Repair, Token Budgeting, Rate-Limit and Fallback Handling, AI Cost Control

Security: OWASP Practices, CSRF/Origin Checks, CORS, Helmet Security Headers, Distributed Rate Limiting, Secure File Upload Validation, Session and Data Isolation

Testing: Vitest, Supertest, Unit and Integration Testing, Test Environment Isolation

DevOps and Tools: Git, GitHub, pnpm Workspaces, Turborepo (Monorepo), Vercel (Serverless Functions, Rewrites, Env Config), Sentry, Production Debugging, VS Code, Linux

PROJECTS:

Project 1: SafeApply.AI (Hiring Trust Platform for Job Seekers, Recruiters & Freelancers)

1) Built a multi-role hiring platform for job seekers, recruiters, freelancers and clients as a TypeScript monorepo (pnpm workspaces, Turborepo) with a React 19 frontend and an Express 5 REST API on Supabase PostgreSQL.

2) Integrated LLM features (Groq, gpt-oss-120b) for CV parsing, CV-to-job matching and bullet rewriting, engineered to run within a free-tier limit of 8,000 tokens per minute through per-task token budgets and low reasoning effort.

3) Designed a line-index CV parser where the model returns only section line ranges and the text is copied verbatim in code, cutting AI output around 10x and preventing invented content; a rule-based parser takes over on rate limits, timeouts or invalid JSON.

- 4) Built company research reports that pull news, GitHub engineering activity and repeat job postings from third-party APIs in parallel, with per-source fallbacks so one failing source never breaks a report.
- 5) Implemented JWT authentication with httpOnly SameSite=Strict refresh cookies, strict role-based portal isolation enforced on both client and server, ownership checks on every mutation, and Row-Level Security.
- 6) Engineered distributed rate limiting for serverless using Upstash Redis with atomic Lua scripts and HMAC-hashed keys, with automatic in-memory fallback when Redis is unavailable.
- 7) Hardened the API with CSRF origin checks, Helmet security headers, Joi validation and secure uploads (PDF/DOCX only, size caps, zip-bomb detection measuring real inflated size).
- 8) Built a freelance workflow (proposals, contracts, invoices, payments, disputes) and recruiter tools (company verification, hiring teams, public hiring record, embeddable website badge).
- 9) Added an AI cost guard that logs the estimated cost of every call to a monthly ledger and automatically pauses or stops AI usage at soft and hard spending limits.
- 10) Deployed the frontend and API on one origin as a Vercel serverless function, with a secret-protected cron endpoint for scheduled jobs; resolved production issues including bundling failures, serverless routing and environment overrides.
- 11) Wrote 60 automated tests with Vitest and Supertest covering authentication, rate limiting, uploads and scheduled jobs.
- 12) Status: in private beta testing. Repository: private (available on request).

Project 2: Chai, Charger & Channay (Spot & Workspace Discovery Platform)

- 1) Built a full-stack location-aware discovery platform with geospatial search and proximity filtering.
- 2) Engineered custom stored procedures (RPCs) for optimized database queries and real-time data retrieval.
- 3) Enforced user-scoped data access via authentication and Row-Level Security (RLS) policies.
- 4) Developed an interactive map UI featuring real-time clustering and dynamic location markers.
- 5) Optimized query performance using indexed geospatial columns and efficient client-side state management.
- 6) Deployed to production via a modern build pipeline with custom routing configuration.
- 7) Implemented full-text search and category filtering at the database level.
- 8) GitHub Repository: <https://github.com/abdulrehmanakapablo/chai-charger-channay>
- 9) Production URL: <https://chai-charger-channay.vercel.app/>

Project 3: Personal Finance Tracker

- 1) Built a full-stack personal finance tracker with interconnected expense and task management modules.
- 2) Designed a cross-module automation where marking a task complete instantly records it as an expense.
- 3) Architected a NoSQL data model to handle dynamic, schema-flexible financial records efficiently.
- 4) Implemented real-time data synchronization ensuring UI reflects database changes without page reload.
- 5) Secured the application with cloud-based authentication and granular user-level data access rules.
- 6) Built a clean, responsive dashboard consolidating financial summaries and pending tasks in one view.
- 7) Deployed to production with a modern build pipeline and configured custom client-side routing.
- 8) GitHub Repository: <https://github.com/abdulrehmanakapablo/personal-finance-tracker>
- 9) Production URL: <https://personal-finance-tracker-f1se.vercel.app/>

PROFESSIONAL EXPERIENCE

Full-Stack Developer | Freelance

March 2026 – Present

- 1)** Took on small freelance projects to apply and strengthen real-world development skills.
- 2)** Built and styled frontend interfaces using React and Tailwind CSS based on client requirements.
- 3)** Deployed projects independently to Vercel and maintained version history using Git.
- 4)** Handled client communication, revisions, and debugging end-to-end without team support.
- 5)** Integrated Supabase and Firebase backends to add authentication and data persistence to client projects.
- 6)** Converted static designs and mockups into fully functional, responsive web pages.
- 7)** Tested and debugged cross-browser layout issues and fixed broken functionality post-deployment.
- 8)** Documented project structure and handed off clean, readable code to clients upon completion.

Operations-Manager | Raasta (formerly Pinkfly)

Nov 2025 – March 2026

- 1)** Managed end-to-end daily operations, optimizing ground logistics workflows and service execution to ensure high operational efficiency and service reliability.
- 2)** Streamlined operational processes and resource allocation, reducing fulfillment turnaround times and cutting down overhead bottlenecks.
- 3)** Collaborated closely with cross-functional teams to integrate ground operational feedback into core system workflows, automating tracking and improving overall service delivery.

Operations Manager | BinKhalid Constructors

April 2024 – Oct 2025

- 1)** Oversee site operations and execution, managing project timelines, site supervisors, and sub-contractors to consistently deliver construction projects on schedule and within budget.
- 2)** Optimized resource allocation and material procurement, streamlining supply chain logistics to reduce raw material wastage and prevent project downtime.
- 3)** Negotiated vendor and subcontractor contracts, managing cost estimations and procurement pipelines to maximize profit margins without compromising structural quality.
- 4)** Acted as the key operational liaison between clients, project architects, structural engineers, and site crews to ensure blueprint alignment and smooth milestone delivery.

Software FrontEnd-Intern | ElAbd Technologies

Jan 2024 – April 2024

- 1)** Developed and maintained responsive, reusable UI components using React.js and modern CSS frameworks, ensuring clean component architecture and high visual fidelity.
- 2)** Translated Figma wireframes and mockups into functional, accessible frontend code with strict adherence to design specifications across mobile and desktop interfaces.
- 3)** Optimized web application performance and cross-browser compatibility, resolving UI layout bugs and improving page render speeds.
